

COMPANY PROFILE & STRATEGIC MASTER PLAN

ITS

Industrial Technology Solutions

Eliminating Vendor Friction. Guaranteeing Industrial Uptime.

El Harrouch, Skikda, Algeria | July 2026

industrialtechnologiesolutions2@gmail.com | 0699 32 40 76

EXECUTIVE SUMMARY

One Team. One Invoice. Zero Downtime.

ITS – Industrial Technology Solutions is a multi-disciplinary technical service enterprise built to eliminate the costly friction of managing separate electrical and mechanical contractors. By converging advanced electrical/electronics engineering with heavy mechanical machine building under one roof, ITS serves as a single, contractually accountable technical partner for manufacturing and processing facilities.

"We do not just fix broken machines; we guarantee industrial uptime."

Positioned to become the premier technical ally for the Skikda industrial corridor.

CORE IDENTITY

MISSION

To deliver dependable electrical, electronic, and mechanical engineering solutions that keep industrial operations running safely and efficiently.

VISION

To become the trusted, full-scope technical partner for regional industry — recognized for pairing electrical expertise with mechanical capability inside a single, accountable team.

CORE VALUES

- Reliability
- Technical Precision
- Safety First
- Responsiveness
- Partnership

01

SERVICES PORTFOLIO

The Dual Engine

Electrical & Electronics + Machine
Building — seamlessly integrated
under one roof.

Powering the Brains of Industry

Industrial Control Panels & Automation

Custom design and assembly of industrial enclosures, integrating low-voltage switchgear, VFDs, and safety relays (IEC/NEMA standards).

PLC Programming & Automation

Advanced logic development for Siemens, Schneider, and Allen-Bradley platforms, including HMI design, SCADA integration, and industrial networking (Modbus, Profinet).

Custom PCB Design & Hardware

End-to-end lifecycle development of application-specific printed circuit boards and embedded systems.

Industrial Installation & Wiring

High-standard power routing, cable tray installation, earthing networks, and precision field instrumentation.

Advanced Diagnostics & Maintenance

Utilizing thermal imaging, insulation resistance meters (Meggers), and power quality analyzers to prevent catastrophic electrical failures.

MACHINE BUILDING & MECHANICAL

Building the Muscle of Manufacturing

Custom Machinery & CNC Development

Complete engineering, CAD/CAM modeling, and construction of tailor-made manufacturing apparatuses and CNC systems.

Design, Build & Commissioning

End-to-end mechanical execution, from structural frame assembly to on-site load testing and final certification.

Spare-Parts Fabrication

High-precision manufacturing of replacement parts (gears, shafts, bushings) using lathes and milling equipment to bypass international supply chain delays.

Preventive & Corrective Maintenance

Proactive lubrication, alignment, and inspection programs, alongside rapid-response hydraulic/pneumatic breakdown repairs.

Machine Retrofitting

Mechanical modernization of legacy machinery to extend operational lifespan and improve output capacity.

BUSINESS ARCHITECTURE

The Business Model Canvas

A strategic architecture designed for accountability, recurring revenue, and scalable growth.

Customers & Value Propositions

CUSTOMER SEGMENTS

1. Large Manufacturers: Heavy industry/processing plants where unplanned downtime equals catastrophic financial loss.
2. Local SMEs: Regional workshops, food processors, packaging plants lacking in-house engineering teams.

VALUE PROPOSITIONS

1. The Master Guarantee: Lead Engineer personally signs off on all final QA.
2. Zero-Vendor Friction: One team, one invoice, total accountability.
3. Agile Local Sourcing: We bypass customs/import delays by maintaining robust local supply chains for critical components.

Channels, Relationships & Revenue

CHANNELS

- Direct B2B Outreach: Targeted pitches to Plant/Maintenance Managers.
- Professional Proposals: ROI-focused, branded PDF Statements of Work.
- The Referral Loop: Triggered at final QA sign-off.

RELATIONSHIPS

- Trusted Advisor: Long-term infrastructure consulting.
- Rapid Response Protocol: Emergency squad for crisis containment.
- SLA Partnerships: Multi-month contracts making ITS an extension of the client ops.

REVENUE STREAMS

- Fixed Projects: Custom builds/overhauls (20-30% margin).
- SLA Retainers: Tiered monthly preventive maintenance.
- Premium Emergency: 1.5x hourly rate + flat dispatch fee.

Resources, Activities, Partners & Costs

KEY RESOURCES

- Lead Engineer + 3 cross-trained specialists
- Codified playbooks, diagnostic checklists, video SOPs
- Thermal imagers, oscilloscopes, service vehicle, machining tools

KEY ACTIVITIES

- PLC coding, panel assembly, fabrication, stress testing
- Continuous codification of expertise into checklists
- B2B prospecting & proposal development

KEY PARTNERS

- Local Component Suppliers for rapid-sourcing
- Regional Industrial Syndicates for B2B visibility
- Safety & Compliance Auditors

COST STRUCTURE

- Tech salaries, safety training, performance incentives
- Fleet fuel, workshop rent, utilities, tool depreciation
- Marketing materials, B2B development costs

Value-Based Pricing, Not Time-Based

Revenue is detached from the clock to reward operational efficiency.

FIXED PROJECTS

Machine Builds / Upgrades

$(\text{Labor Hrs} \times 1,000 \text{ DZD}) + \text{Materials (10-20\% markup)} + \text{Risk Buffer (5-10\%)} + \text{Margin (20-30\%)}$

Bound by a strict Statement of Work (SOW) to prevent scope creep.

20-30% MARGIN

MONTHLY MAINTENANCE

Preventive SLA Contracts

$(\text{Est. Monthly Hrs} \times 1,000 \text{ DZD}) + 20\% \text{ Reliability Margin}$

Sold as 6- or 12-month contracts for predictable cash flow.

RECURRING REVENUE

PREMIUM EMERGENCY

Rapid Response Service

$\text{Flat Dispatch Fee (2,000 DZD)} + \text{Premium Rate (1,500 DZD/hr)}$

1.5x multiplier for after-hours/weekends. Communicated clearly before dispatch.

1.5X MULTIPLIER

OPERATIONS & EXECUTION

Structure, System & Speed

The organizational design, daily operating rhythm, and 90-day sprint to cash flow.

Organizational Structure & The Bridge System

Lead Engineer / Owner

Client acquisition, strategic planning, and Final QA (The Master Guarantee).

Electrical & Electronics Lead Tech

Control panels, PLCs, wiring. Support: Mechanical assembly during high-volume periods.

Mechanical Building Lead Tech

Fabrication, hydraulics, CNC. Support: Cable management and device mounting.

Generalist Technician – The Bridge

Cross-trained to integrate electrical systems with mechanical chassis. Eliminates the not-my-job gap.

THE BRIDGE CONCEPT

One cross-trained technician eliminates the handoff gap between electrical and mechanical work.

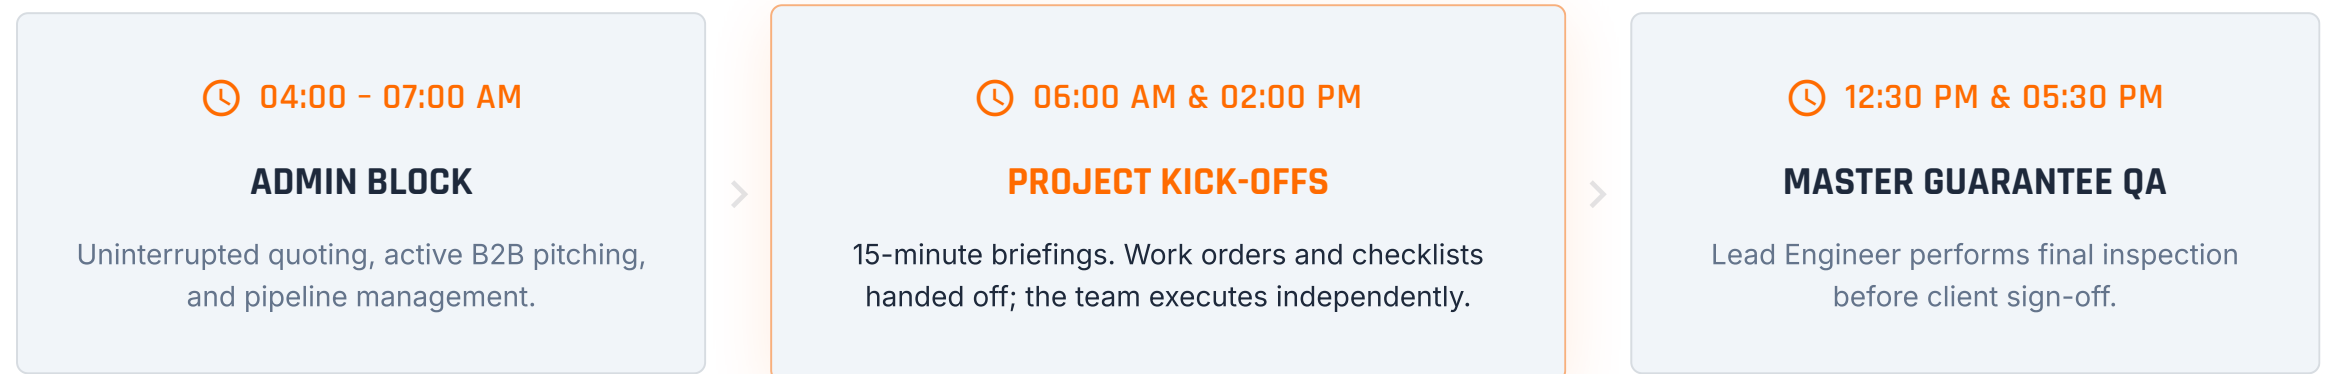

No Finger-Pointing

No Delays

The Bridge makes ITS a truly unified team, not two departments sharing a workshop.

The Bookend System

Functional pillars connected by a Bridge, managed through time-blocking to prevent founder burnout.

The 90-Day Sprint

PHASE 1 Days 1-30

Foundation & Commercial Readiness

- Calibrate all diagnostic gear in the El Harrouch workshop
- Hardcode 1,000 DZD/hr baseline into internal Excel quoting calculators
- Launch localized website and finalize dual-sided business cards
- Execute Operation: Skikda Industrial Mapping — build target list of 20 facilities

PHASE 2 Days 31-60

Systematization & Delegation

- Record video SOPs for Top 5 most recurring technical assemblies
- Fully deploy physical task checklists
- Enforce Bookend system — Lead Engineer stops turning wrenches
- Synthesize Phase 1 jobs into 1-page data-driven Case Studies

PHASE 3 Days 61-90

Expansion & Cash Flow Lock

- Pitch enterprise-level plants using Case Studies and formal PDF proposals
- Close minimum 2 active 6-to-12-month SLAs for recurring cash flow
- Implement Actual vs. Quoted labor ledger (>1,000 DZD/hr earned yield)

Operation Skikda Industrial Mapping

With team on payroll and workshop secured, immediate cash-flow generation is the sole priority.

1 THE GROUND WAR

Drive through Zone Industrielle d'El Harrouch, Zone Industrielle de Skikda, and Azzaba during shift changes (07:00 AM, 12:00 PM, 05:00 PM). Log factory names from gate signs.

Goal: Extract 20 company names

2 SUPPLY CHAIN INTELLIGENCE

Visit 2-3 local electrical/mechanical supply shops. Pitch: "If you give me the names of factories buying emergency parts, I will buy all my future parts from you."

Goal: Extract 5 high-quality leads

3 DIGITAL EXTRACTION

Google Maps: Search "Usine Skikda", "SARL industrielle Skikda". LinkedIn: Search titles — Directeur d'usine Skikda, Responsable maintenance Skikda.

Goal: Extract 5 decision-maker contacts

Key Performance Indicators

Reviewed weekly by the Lead Engineer to track roadmap success.

PIPELINE VELOCITY

Number of new target facilities added to the Hit List per week.

SLA CONVERSION RATE

Percentage of emergency one-off clients converted to monthly SLAs.

> 30%

QA FIRST-PASS YIELD

Percentage of jobs passing Master Guarantee QA without rework.

> 90%

LABOR YIELD

Actual billed revenue divided by actual hours worked

> 1,000 DZD/hr
